1 Highest Priority: The Proposal Itself

[1] **PM: Doped Inert Single Crystals for Probing Beyond the Standard Model**
Why it's important: This document serves as the primary guiding proposal for the research project, outlining the motivation, methodology, and scientific objectives related to the growth of doped noble gas single crystals for fundamental physics applications, particularly EDM measurements.

2 References Cited in the Proposal

(A) Atomic Beam, Doping, and Crystal Growth

[2] A. C. Vutha, M. Horbatsch, and E. A. Hessels (2018).
"*Orientation-dependent hyperfine structure of polar molecules in a rare-gas matrix: A Scheme for Measuring the Electron Electric Dipole Moment.*"
Why it's important: Discusses the effect of a rare-gas matrix on the hyperfine structure of embedded molecules, which relates to how dopants behave in cryogenic noble gas crystals.

[3] Sunil Upadhyay et al. (2019).
"*Spin coherence and optical properties of alkali-metal atoms in solid parahydrogen.*"
Why it's important: Investigates how alkali atoms (Rb, Cs) behave in frozen matrices,
